THE HOME GARDEN

John Baer Tomato

TO be able to go into the home garden and pick or pull fresh, crisp vegetables is a rare treat only fully understood by those who have tried it. You cannot appreciate the true flavor and sweetness of vegetables unless you have grown them yourself and plucked them just previous to preparing them for dinner. Market sold vegeta-

bles twenty-four hours old are poor and expensive. Growing a garden is both healthful and pleasant. Our Vegetable "Seeds of Quality" possess real merit and honest value. Every Variety listed in our price list has been carefully selected and tested. We recommend them and can assure you that better seeds cannot be found anywhere at any price. Send us your order and we will send you vegetable seeds that will produce satisfactory results and please you. The prices quoted include payment of postage on packets, ounces, quarter pounds and pounds. They do not include free delivery charges on larger quantities.

John Baer Tomato

A splendid early tomato of recent introduction, producing large, bright red, solid fruit early in the season. It is an excellent producer and the tomatoes are firm and one of the best for shipping. John Baer is an enormous cropper and when ripe will not burst. The color is bright red and has a mild, delicious flavor, almost seedless. It is solid and meaty and has just enough foliage. See price list for prices.

Bonnie's Best, Early Tomato

Is from ten to fifteen days earlier than the Chalk's Early Jewel. Ripens about the same time as the Earliana. A vigorous cropper and very prolific. As a shipping tomato it is one of the best, as the tomatoes run very regular and even in size. We consider the John Baer and Bonnie's Best the two finest all around tomatoes on the market. See price list for prices.

Some Facts About Cashman's Grimm Alfalfa.

It is without doubt the hardest alfalfa on the market. The strong branching roots of the Grimm prevent winter killing as in ordinary alfalfa. These roots which grow in time from five to eighteen feet in length provide drouth resistance and an unusual productiveness. The Grimm alfalfa is a great agency in transforming the free nitrogen of the air into soluble nitrates through the agency of the nodule forming bacteria on the roots. Grimm Alfalfa may be cut three or four times a season, yielding from one to two tons per acre for each cutting. The forage is most nutritious and much relished by all kinds of stock. It comes the closest to being a perfect ration of any farm crop grown. The seed should be sown broadcast at the rate of from fourteen to eighteen pounds to the acre. Seeding can be done about the middle of April or early part of May, depending upon the spring. However, the best method of seeding is to seed it without a nurse crop. The ground should be cultivated intensely until the latter part of July or the first of August and then seeded. The seed should never be sown on cold, sticky, clay land where water stands a short distance below the surface. The farmers of Southern Minnesota are beginning to realize more every year the great value of growing alfalfa. We cannot recommend our Grimm Alfalfa too highly. Ask for a free sample of our Grimm.

Minnesota No. 594 Victory Oats

This variety was originated by the Minnesota Experimental Station and is recommended by them as a medium early variety. Can be seeded with Marquis wheat and will ripen about the same time. We offer certified seed in this variety.

Kherson Oats—1920 Grown

We have a few thousand bushels of 1920 grown certified Kherson Oats which we will furnish to our customers as long as it will last. There is very little good seed oats to be had this year so would advise ordering early. See price list for prices.

Mindum Wheat

We have to offer a small stock of Mindum Wheat, grown from seed stock we secured from the University Farm last spring. This wheat is recommended as superior to any other rust resistant variety, not only for growing in Southern Minnesota but for milling purposes as well. See price list for prices.

FREIGHT AND EXPRESS RATES Remember we do not pay the charges. It is just as cheap to pay them at your end as here. Always state whether you want your shipment by freight or express—otherwise we ship by cheapest route. Let us urge you to order early and have your seeds come by freight and save money.

Cashman's Seeds

Important Announcement!

Owing to the fact that the cost of building and issuing a catalog is still high and out of proportion to the products grown from the seeds listed there, we have decided not to issue a catalog this year. We can save our customers money on every package or pound of seed they buy by eliminating this expense. We realize that this is a year, above all other years, when buyers of seeds or any other commodity are anxious to get the greatest value for their money. We will endeavor to give descriptions in this folder of the newer varieties and we will be glad to hear from any of our customers and give them any information relative to varieties they are interested in by direct correspondence. We believe we can render you better service at a lower cost by not issuing a catalog this year. However, we do not want our customers to think that we are not in favor of a catalog and are eliminating it for good—we believe it a very necessary feature and necessary to the conduct of a real successful seed business, in normal years, but we realize that almost everybody have seed catalogs lying around, most of them giving descriptions of the same things, and we also realize that a majority of our customers are familiar with the standard varieties and no doubt as well versed in the seeding, care and habits of same as the average seedsman.

We wish to thank our friends for the splendid business with which they favored us last season and trust the results of your plantings were as gratifying as we both could wish and will justify you in intrusting to us a liberal share of your orders for this year. We assure that we will do our best to please.

Clinton Falls Nursery Company

Selecting Pedigreed Seed Corn from our own fields near Owatonna.

Just a Word About Clover

There is no bigger question before the farmers right now than that of our clover seed. The country is full of bad weeds and unless we can call a halt somewhere it will be impossible to get real good clover seed. The trouble is that so many farmers will buy an inferior grade of seed because of a little difference in price. They think it is all about the same and one lot is higher because the holder wants more profit. Now the fact is that the big profits are made on the low grade seed. Now here is what I am getting at; there is no need of buying poor clover seed. Get samples of the seed and have them tested for purity and germination. Send them to your State Experimental Station. Don't buy any seeds even from a neighbor's farm without strict examination. It is better to pay a dollar or even two dollars more a bushel than to get 10% weeds and dirt, even 1% noxious weed seed is too much in clover. We advise getting samples that represent the seed you are to get and be sure that you get seed like the sample. We will be more than glad to furnish our friends with samples and have them make a thorough test before purchasing. They will then not only be satisfied they are getting their money's worth but that their seed is pure. See price list for prices.

Certified Brown Chestnut Soy Beans

Our Brown Chestnut Soy Beans are home grown and we can recommend them to our friends to plant in corn for ensilage purposes. They add greatly to the ensilage when planted with corn. They require no extra care as they are cultivated with the corn and are a great soil builder. The only expense connected with the Soy Bean is the seed which is a very small matter compared with the results. See price list for prices.

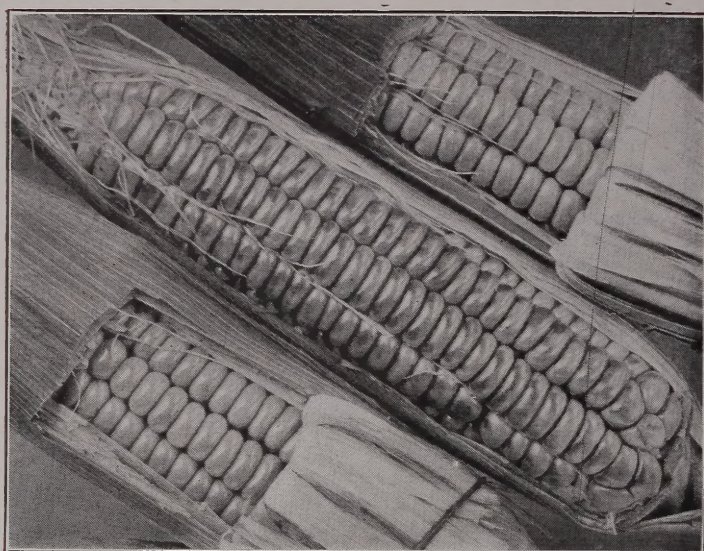

Minnesota No. 184 Barley

Minnesota No. 184 Barley surpasses all others in yield. The University of Minnesota Experiment Station has recently introduced this variety which out yields all other varieties. It is a six rowed variety and originated through selection from the Minnesota No. 105. In many ways it is like the Oderbrucker but has proven a much better yielder. Seed of this variety is excellent in quality. It is early and uniform in maturing and produces heads that are filled with heavy, plump grain. We offer certified and registered seed in this variety. Please refer to our price list for prices.

Home Grown Seed Corn

You can increase your yield by securing our certified seed corn. We select it early. It is all grown in Steele County, stored in a well ventilated room where it is properly cared for, thoroughly tested and guaranteed to germinate 96% or better. We have a good stock of the following varieties: Silver King, Cashman's Yellow Dent, Minnesota No. 13, Rustler's White Dent, Northwestern Dent, also plenty of silage corn, both in the flint and dent varieties.

A Few of Our Newer Varieties Showing **SPECIAL MERIT**

Golden Bantam

We are listing below a few special varieties of vegetables that we have tried out in our trial gardens and have found especially good. Some of these varieties are now generally recognized as staple varieties of vegetables.

Early Fortune Cucumber

This is one of the finest types of white spine variety ever produced. It is very early and very productive. Can be depended upon for early market. One of its best features is its disease resistance and wonderful shipping qualities. The cucumbers will average from eight to nine inches, slightly tapering, white flesh, very crisp and firm. We recommend a thorough tryout of this variety. See price list for prices.

Dreer's Aristocrat Sweet Corn

A new early variety which promises to rival the Golden Bantam. This variety of sweet corn is early and a heavy yielder. We have only grown it one year in our trial station but we believe that it possesses real merit. See price list for prices.

Eldorado Musk Melon

An early variety of musk melon that looks like a comer. It is almost as large as the Miller's Cream but ripens much earlier has a delicious flavor. We would advise our friends to try this musk melon in their home garden. See price list for prices.

Cashman's Free Flower Seeds

To every customer ordering \$1.00 worth or more of seeds of any kind, I will send FREE one packet each of five popular flower seeds. We are to make the selection but we will give you flowers that I know you will like. If you send an order amounting to \$1.00 or more at a time it will not be necessary to mention this offer as it will be taken care of, but if you send in two or three small orders which will amount to \$1.00 or more I would advise mentioning our offer as it might be overlooked. What is more beautiful than flowers? You can have a beautiful flower garden by planting these free seeds and all we ask is that you plant and care for them. I hope you won't stop with these I am giving you as I would like for you to have a much larger flower garden.
